

Admission guidance for Pakistani Students interested in pursuing graduate studies in the United States

To,

Director Admission

Cc. Admission Office,

Alumni Placement Office

Office of the International Education

I am Rahmatullah Safdar, a PhD student from the Department of Biomedical Engineering, Wichita State University, Kansas, USA. I am also serving as President Pakistani Students Association, and Co-Advisor for Muslim Students Association in my university. Both these associations work to improve the college life experience of Pakistani students studying at Wichita State University.

I recently visited Pakistan for my summer vacation, and I was planning to visit your university, meet your students and talk about my experience as a PhD student studying on scholarship and different graduate programs that can motivate your students for pursuing a graduate degree from the United States. Due to summer break, I was not able to visit your campus.

I am back to U.S., and I am reaching out to you for collaboration that can provide your students with an opportunity to know about admission requirements for US colleges and universities. Can we schedule a virtual meeting to discuss this collaboration and the opportunities this can bring for your students? Please let me know a day and time that works for you, and we will schedule a meeting. Later, we will schedule a virtual admission information session for your students.

As a Pakistani student with both undergraduate and master's degrees obtained in Islamabad, I am committed to contributing to the academic and research development of Pakistan. My goal is to facilitate the advancement of Pakistani students by supporting their academic aspirations and fostering opportunities for Pakistani faculty and researchers to engage in collaborative research initiatives with their counterparts in the United States across diverse disciplines. Please feel free to share my contact information with your students and faculty members.

Kind regards

Rahmatullah Safdar

Undergrad in Electrical & Electronics Engineering, Bahria University Islamabad,

Master's in Electrical & Electronics Engineering, NUST College of EME

PhD Biomedical Engineering, Wichita State University (in progress)

About Wichita

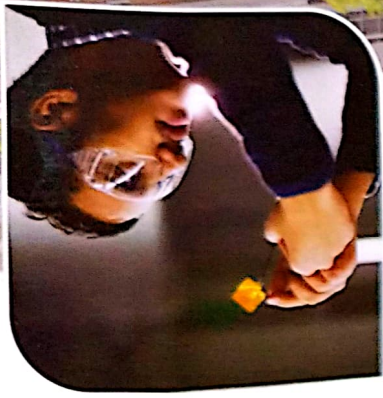

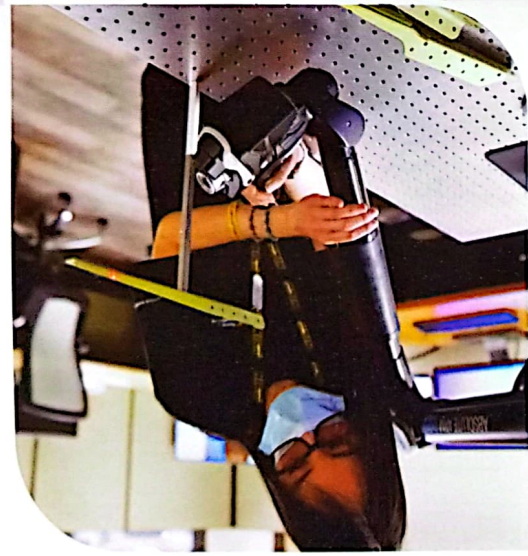

As the largest metropolitan area in Kansas, Wichita has become the epicenter for businesses and entertainment. Although Wichita continues to grow in population, the city still provides a Midwestern feeling that makes it a welcoming city for aspiring college students.

Wichita is one of the most affordable college towns in America and offers an abundance of apartment and housing options. Whether you are looking to be at the center of downtown or near campus, Wichita has it all at an inexpensive cost.

There are more than ten shopping, dining, and entertainment districts in Wichita, each with their own unique atmosphere. Filled with local breweries, restaurants, and food trucks, Wichita has been named one of the top most surprising foodie cities. There are several food and beer festivals that take place throughout the year, and even a food truck plaza right here on WSU's campus. With its many venues, events, and multicultural offerings, Wichita presents an enriching environment where students can thrive.
